

Trace Brilliant

Leakage Detector

TRACE BRILLIANT is a highly concentrated and very penetrating red dye for a reliable, fast and precise detection of refrigerant gas leaks from refrigeration and air conditioning systems.

It's a tracer compatible with all types of refrigerant gas. It also detects the loss through ice in the form of bright red spots. It doesn't evaporates and there's no deposits, it doesn't give any false positive and by using a white support it allows to identify the leakage out of sight.

TRACE BRILLIANT can be loaded when required or can be used as a preloaded tracer, its activity is permanent, till the lubricant is replaced.

Instructions: loading the tracer in the low pressure area by using the syringe. When using the FLEX adapter fill up the tube before connecting to the system. Once connected apply with a steady pressure.

Use 7.5 ml (1/4 FL OZ) TRACE BRILLIANT for 0.5 kg of lubricant and its multiples up to 4.0 kg.

For bigger systems use a 1:60 dilution of the product.

For Mineral-oil systems use Mineral Trace Brilliant.

For professionals is recommended the use of protective goggles and gloves.
